## About Lynk & Co 02 (2025-...)

The Lynk & Co 02 (2025-...) is an all-electric rear-wheel drive SUV. Production of the car hasn't started yet. The starting price is expected to be around €35,995.

The Lynk & Co 02 (2025-...) has a 69 kWh battery pack, allowing it to travel up to 385 km on a single charge. The car has an average efficiency of 17.1 kWh per 100 km (or 5.83 km per kWh) — ranked Nº470 out of 923 electric vehicles.

## How powerful is it? How fast does it accelerate?

The Lynk & Co 02 (2025-...) achieves a 0 to 60 mph acceleration in 5.7 seconds (placing it at [Nº41 out of 118 ranked positions](#), among 923 electric vehicles, with some cars sharing positions) and attains a maximum speed of 112 mph.

Its powertrain provides a power output of up to 200 kW (268 hp) and a torque of 253 lb-ft.

## How far can it go on single charge? What is the real-world range?

Lynk & Co 02 (2025-...) achieves a real-world range of 239 miles, placing it at [Nº133 among 259 ranked positions](#). However, this range is subject to several influences:

- Speed: Traveling at higher speeds reduces battery life.
- Temperature: Extreme cold or hot weather can affect range.
- Terrain: Hilly or mountainous landscapes decrease range.
- Driving habits: Aggressive driving with frequent acceleration and braking consumes more energy.
- Feature usage: Climate control and media systems also influence range.

It's important to acknowledge that these are estimations, and your actual driving range may differ. Consider these factors when planning your trip and be ready for potential charging stops.

## What charging options are available? How long does it take to charge it?

The Lynk & Co 02 (2025-...) in the USA comes with a CCS Type 2 charging port. It can be charged at home using a standard domestic socket or at any public AC charging station with the compatible cable. It's important to note that the car's on-board charger (inverter) limits the maximum AC charging rate to 11 kW, resulting in approximately 36 miles of range added per hour of charging.

For significantly faster charging, public DC fast-charging stations are available. Although the car can achieve a maximum DC charging rate of 150 kW, factors such as battery temperature and charge level may affect the actual charging speed.
