The Tesla Model Y Long Range RWD (2024-2025) is an all-electric rear-wheel drive SUV. It came out in 2024. Tesla stopped making the Long Range RWD in 2025 and replaced it with the Tesla Model Y Long Range RWD (2025-...). You can still find Tesla Model Y Long Range RWD (2024-2025) on the used car market, with prices starting around \$39,455. The car is not available on the US market.

The Tesla Model Y Long Range RWD (2024-2025) has a 78.1 kWh battery pack, allowing it to travel up to 311 mi on a single charge — ranked №117 out of 918 electric vehicles.

How powerful is it? How fast does it accelerate?

The Tesla Model Y Long Range RWD (2024-2025) achieves a 0 to 60 mph acceleration in 6.5 seconds (placing it at №49 out of 118 ranked positions, among 918 electric vehicles, with some cars sharing positions) and attains a maximum speed of 135 mph.

Its powertrain provides a power output of up to 250 kW (335 hp) and a torque of 332 lb-ft.

How far can it go on single charge? What is the real-world range?

Tesla Model Y Long Range RWD (2024-2025) achieves a real-world range of 311 miles, placing it at №63 among 260 ranked positions. However, this range is subject to several influences:

- Speed: Traveling at higher speeds reduces battery life.
- Temperature: Extreme cold or hot weather can affect range.
- Terrain: Hilly or mountainous landscapes decrease range.
- Driving habits: Aggressive driving with frequent acceleration and braking consumes more energy.
- Feature usage: Climate control and media systems also influence range.

It's important to acknowledge that these are estimations, and your actual driving range may differ. Consider these factors when planning your trip and be ready for potential charging stops.

What charging options are available? How long does it take to charge it?

The Tesla Model Y Long Range RWD (2024-2025) in the USA comes with a Tesla (NACS) charging port. It can be charged at home using a standard domestic socket or at any public AC charging station with the compatible cable. It's important to note that the car's on-board charger (inverter) limits the maximum AC charging rate to 11.5 kW, resulting in approximately 43 miles of range added per hour of charging.

For significantly faster charging, public DC fast-charging stations are available. Although the car can achieve a maximum DC charging rate of 250 kW, factors such as battery temperature and charge level

may affect the actual charging speed.
