About Audi Q4 e-tron 35 (2024-...)

The Audi Q4 e-tron 35 (2024-...) is an all-electric rear-wheel drive SUV. It came out in 2024 replacing the older Audi Q4 e-tron 35 (2021-2023). The car is not available on the US market.

The Audi Q4 e-tron 35 (2024-...) has a 55 kWh battery pack, allowing it to travel up to 182 mi on a single charge — ranked №641 out of 816 electric vehicles.

How powerful is it? How fast does it accelerate?

The Audi Q4 e-tron 35 (2024-...) achieves a 0 to 60 mph acceleration in 8.6 seconds (placing it at [№69 out of 116 ranked positions](#), among 816 electric vehicles, with some cars sharing positions) and attains a maximum speed of 99 mph.

Its powertrain provides a power output of up to 125 kW (168 hp) and a torque of 229 lb-ft.

How far can it go on single charge? What is the real-world range?

Audi Q4 e-tron 35 (2024-...) achieves a real-world range of 182 miles, placing it at [№179 among 249 ranked positions](#). However, this range is subject to several influences:

- Speed: Traveling at higher speeds reduces battery life.
- Temperature: Extreme cold or hot weather can affect range.
- Terrain: Hilly or mountainous landscapes decrease range.
- Driving habits: Aggressive driving with frequent acceleration and braking consumes more energy.
- Feature usage: Climate control and media systems also influence range.

It's important to acknowledge that these are estimations, and your actual driving range may differ. Consider these factors when planning your trip and be ready for potential charging stops.

What charging options are available? How long does it take to charge it?

The Audi Q4 e-tron 35 (2024-...) in the USA comes with a CCS Type 2 charging port. It can be charged at home using a standard domestic socket or at any public AC charging station with the compatible cable. It's important to note that the car's on-board charger (inverter) limits the maximum AC charging rate to 11 kW, resulting in approximately 35 miles of range added per hour of charging.

For significantly faster charging, public DC fast-charging stations are available. Although the car can achieve a maximum DC charging rate of 145 kW, factors such as battery temperature and charge level may affect the actual charging speed.

Use [EV Charging Calculator](#) to estimate charging time, rate, and cost.
