About Citroën e-Berlingo XL 50 kWh (2024-...)

The Citroën e-Berlingo XL 50 kWh (2024-...) is an all-electric front-wheel drive minivan. It came out in 2024 replacing the older Citroën e-Berlingo XL 50 kWh (2021-2024). The car is not available on the US market.

The Citroën e-Berlingo XL 50 kWh (2024-...) has a 52 kWh battery pack, allowing it to travel up to 183 mi on a single charge — ranked №701 out of 902 electric vehicles.

How powerful is it? How fast does it accelerate?

The Citroën e-Berlingo XL 50 kWh (2024-...) achieves a 0 to 60 mph acceleration in 11.3 seconds (placing it at **№93 out of 118 ranked positions**, among 902 electric vehicles, with some cars sharing positions) and attains a maximum speed of 82 mph.

Its powertrain provides a power output of up to 100 kW (134 hp) and a torque of 192 lb-ft.

How far can it go on single charge? What is the real-world range?

Citroën e-Berlingo XL 50 kWh (2024-...) achieves a real-world range of 183 miles, placing it at **№182 among 257 ranked positions**. However, this range is subject to several influences:

- Speed: Traveling at higher speeds reduces battery life.
- Temperature: Extreme cold or hot weather can affect range.
- Terrain: Hilly or mountainous landscapes decrease range.
- Driving habits: Aggressive driving with frequent acceleration and braking consumes more energy.
- Feature usage: Climate control and media systems also influence range.

It's important to acknowledge that these are estimations, and your actual driving range may differ. Consider these factors when planning your trip and be ready for potential charging stops.

What charging options are available? How long does it take to charge it?

The Citroën e-Berlingo XL 50 kWh (2024-...) in the USA comes with a CCS Type 2 charging port. It can be charged at home using a standard domestic socket or at any public AC charging station with the compatible cable. It's important to note that the car's on-board charger (inverter) limits the maximum AC charging rate to 7.4 kW, resulting in approximately 24 miles of range added per hour of charging.

For significantly faster charging, public DC fast-charging stations are available. Although the car can achieve a maximum DC charging rate of 100 kW, factors such as battery temperature and charge level may affect the actual charging speed.
