The Volvo EX30 Cross Country (2025-...) is an all-electric SUV. It came out in 2025. Brand new, the car starts around \$50,000. The car is not available on the US market.

The Volvo EX30 Cross Country (2025-...) has a 69 kWh battery pack, allowing it to travel up to 222 mi on a single charge — ranked N°569 out of 933 electric vehicles.

This trim is set to launch in the USA in 2026.

How powerful is it? How fast does it accelerate?

The Volvo EX30 Cross Country (2025-...) achieves a 0 to 60 mph acceleration in 3.5 seconds (placing it at **N°19 out of 118 ranked positions**, among 933 electric vehicles, with some cars sharing positions) and attains a maximum speed of 112 mph.

Its powertrain provides a power output of up to 315 kW (422 hp) and a torque of 400 lb-ft.

How far can it go on single charge? What is the real-world range?

Volvo EX30 Cross Country (2025-...) achieves a real-world range of 222 miles, placing it at **N°150 among 262 ranked positions**. However, this range is subject to several influences:

- Speed: Traveling at higher speeds reduces battery life.
- Temperature: Extreme cold or hot weather can affect range.
- Terrain: Hilly or mountainous landscapes decrease range.
- Driving habits: Aggressive driving with frequent acceleration and braking consumes more energy.
- Feature usage: Climate control and media systems also influence range.

It's important to acknowledge that these are estimations, and your actual driving range may differ. Consider these factors when planning your trip and be ready for potential charging stops.

What charging options are available? How long does it take to charge it?

The Volvo EX30 Cross Country (2025-...) in the USA comes with a CCS Type 1 charging port. It can be charged at home using a standard domestic socket or at any public AC charging station with the compatible cable. It's important to note that the car's on-board charger (inverter) limits the maximum AC charging rate to 11 kW, resulting in approximately 34 miles of range added per hour of charging.

For significantly faster charging, public DC fast-charging stations are available. Although the car can achieve a maximum DC charging rate of 175 kW, factors such as battery temperature and charge level

may affect the actual charging speed.
