## About DS 8 AWD Long Range (2025-...)

The DS 8 AWD Long Range (2025-...) is an all-electric SUV. It came out in 2025. The car is not available on the US market.

The DS 8 AWD Long Range (2025-...) has a 101 kWh battery pack, allowing it to travel up to 362 mi on a single charge — ranked №39 out of 935 electric vehicles.

## How powerful is it? How fast does it accelerate?

The DS 8 AWD Long Range (2025-...) achieves a 0 to 60 mph acceleration in 5.2 seconds (placing it at [№36 out of 118 ranked positions](#), among 945 electric vehicles, with some cars sharing positions) and attains a maximum speed of 118 mph.

Its powertrain provides a power output of up to 276 kW (370 hp) and a torque of 377 lb-ft.

## How far can it go on single charge? What is the real-world range?

DS 8 AWD Long Range (2025-...) achieves a real-world range of 362 miles, placing it at [№27 among 263 ranked positions](#). However, this range is subject to several influences:

- Speed: Traveling at higher speeds reduces battery life.
- Temperature: Extreme cold or hot weather can affect range.
- Terrain: Hilly or mountainous landscapes decrease range.
- Driving habits: Aggressive driving with frequent acceleration and braking consumes more energy.
- Feature usage: Climate control and media systems also influence range.

It's important to acknowledge that these are estimations, and your actual driving range may differ. Consider these factors when planning your trip and be ready for potential charging stops.

## What charging options are available? How long does it take to charge it?

The DS 8 AWD Long Range (2025-...) in the USA comes with a CCS Type 2 charging port. It can be charged at home using a standard domestic socket or at any public AC charging station with the compatible cable. It's important to note that the car's on-board charger (inverter) limits the maximum AC charging rate to 11 kW, resulting in approximately 37 miles of range added per hour of charging.

For significantly faster charging, public DC fast-charging stations are available. Although the car can achieve a maximum DC charging rate of 200 kW, factors such as battery temperature and charge level may affect the actual charging speed.
